Manufacture, filling, packaging and storage in accordance with Good Manufacturing Practice standards. These are guidelines on quality assurance for production processes and environment in the production of medicines, active ingredients and medicinal products as well as of foodstuffs. Quality assurance plays a central role in the manufacturing of pharmaceutical products since any lessening in quality can directly affect the health of the consumer. A quality management system in accordance with GMP guarantees product quality and compliance with requirements set by the health authorities for the sale of products.
